Name: Victor Ebere
Page Responsibility: Shopping Cart and Checkout Page

What Is Working So Far

I developed the Shopping Cart and Checkout pages for the TTU Marketplace using semantic HTML and external CSS. Both pages include navigation, a search bar, and a Create Listing link. The Shopping Cart displays product information, quantity, and price, with options to continue shopping or proceed to checkout. The Checkout page includes shipping information fields, payment method choices, card detail fields, an order summary, and Cancel Purchase and Submit Purchase controls. I also added accessibility features, including labeled form fields, alternative text for product images, and accessible navigation. The pages are styled prototypes; navigation and purchase processing are not fully connected.

What's Next

I still need to improve the responsiveness of the Shopping Cart page so that it displays properly on smaller screens and mobile devices. I also need to organize the CSS into the required `css/styles.css` file and make sure all image paths work correctly within the team repository. Additionally, I plan to connect the navigation links to the other pages of the TTU Marketplace and improve the functionality of the shopping cart buttons and quantity inputs. Finally, I will test the page across different screen sizes to make sure the layout is consistent.
